Art Unit: 2626

#### **DETAILED ACTION**

### Response to Amendment

1. This is in response to the amendment filed on 06 January 2006.

## Response to Arguments

2. Applicant's arguments with respect to claims1-21 have been considered but are most in view of the new ground(s) of rejection. Claim 22 is allowable since the Terminal Disclaimer for application 09/925,651 has been received and approved. The Final Rejection of 02 November 2005 has been withdrawn.

#### Terminal Disclaimer

3. The terminal disclaimer filed on 06 January 2006 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of application 09/925,651 has been reviewed and is accepted. The terminal disclaimer has been recorded.

# Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to

Page 2

be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 1-19 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,972,863. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 1 of the present application recites: A printing method comprising the steps of: receiving print stream data at a printer; detecting an external network address in the received print stream data; obtaining at least one parameter of a document at the external network address; merging the document into the print stream data to form a modified document; and printing the modified document.

Claim 2 of the present application recites: A method wherein the detecting an external network address step comprises a barcode in the received data and translating the barcode to the external network address.

Claim 1 in the referenced patent recites: the receiving step; detecting and translating the barcode step; merging step; and printing step. The retrieving and selecting step is equivalent to the present application's obtaining step.

It would be obvious to one having ordinary skill in the art that these limitations are variations of each other.

6. Claims 3-19 are rejected for being dependent on a rejected double-patented base claim.

Art Unit: 2626

7. Claim 20 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 24 of U.S. Patent No. 6,972,863. Although the conflicting claims are not identical, they are not patentably distinct from each other because Claim 20 of the present application recites: A program product for printing comprising a computer readable medium having machine readable program code embodied therein to be executed by a computer the machine readable program code comprising: computer code for receiving print stream data at a printer; computer code for detecting an external network address in the received print stream data; computer code for merging the document into the print stream data to form a modified document; computer code for and printing the modified document.

Claim 24 in the referenced patent recites: the receiving code; detecting and translating code; merging code; and printing code. The retrieving and selecting code is equivalent to the present application's obtaining code.

It would be obvious to one of ordinary skill in the art that these limitations are variations of each other.

8. Claim 21 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 23 of U.S. Patent No. 6,972,863. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 21 of the present application recites: A system for printing, comprising: a component for receiving print stream data at a printer; a component for detecting an external network address in the received print stream data; a component for obtaining at least one parameter of a document at the external network address; a component for

Art Unit: 2626

merging the document into the print stream data to form a modified document; and a component for printing the modified document.

Claim 31 in the referenced patent recites: the receiving component; detecting and translating component; the merging component; and the printing component. The retrieving and selecting component is equivalent to the present application's obtaining component.

It would be obvious to one having ordinary skill in the art that these limitations are variations of each other.

# Allowable Subject Matter

9. Claim 22 is allowed. The Terminal disclaimer for application 09/925,650 has been received and entered.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Satwant K. Singh whose telephone number is (571) 272-7468. The examiner can normally be reached on Monday thru Friday 8am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kimberly A. Williams can be reached on (571) 272-7471. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
